(Light blue signifies a decrease from yesterday. Pink signifies an increase from yesterday)

Deaths: We are pleased to report no new deaths today. We have experienced a total of 66 deaths resulting in a 2.8% mortality rate among known cases. This compares with a 1.9% mortality rate at the state level, and a 3% morality rate at the national level.

Hospitalizations: We presently have 13 cases in the hospital. This is 1 more than yesterday. The most hospitalizations we have had at any one time was 33. We have had a total of 210 hospitalizations resulting in a 8.8% hospitalization rate among known cases. The state hospitalization rate is 8.7%. The latest state data shows that 69% of ICU beds and 25% of ventilator capacity are being utilized.

Total (Cumulative) Cases: The Lake Cumberland District has experienced a total of 2,388 cases since the onset of the outbreak.

Released (Not contagious) Cases: We released 20 cases today from isolation. Released cases include: Casey: 2; Green: 3; Pulaski: 12; and, Taylor: 3. In all, we have released 84.2% of our total cases.

Active (Current) Cases: We added 4 more cases today than we released historic cases. Taking all things into account, this leaves us with 311 active cases in our district across all 10 of our district's 10 counties.
Where Cases Tied to: The most common areas to which we are seeing cases tied are (in descending order): Long-term Care/Residential Facilities, Schools, Businesses, and Family.

New Cases: We report that our total case count has increased by 24 today: Clinton: 2; Pulaski: 9; Russell: 4; Taylor: 7; and, Wayne: 2. Our current new case growth rate is: 1.013. This means our total case count is projected to double every 54.83 days. The new cases include:

- Clinton: A 75-year-old female who is self-isolated, still symptomatic
- Clinton: A 49-year-old male who is self-isolated, still symptomatic
- Pulaski: A 62-year-old female who is self-isolated, asymptomatic
- Pulaski: A 56-year-old female who is self-isolated, asymptomatic
- Pulaski: A 72-year-old male who is self-isolated, still symptomatic
- Pulaski: A 22-year-old male who is self-isolated, still symptomatic
- Pulaski: A 42-year-old female who is self-isolated, still symptomatic
- Pulaski: A 41-year-old male who is self-isolated, still symptomatic
- Pulaski: A 54-year-old male who is hospitalized, still symptomatic
- Pulaski: A 13-year-old male who is self-isolated, still symptomatic
- Pulaski: A 59-year-old female who is self-isolated, still symptomatic
- Pulaski: A 22-year-old female who is self-isolated, still symptomatic
- Russell: A 7-year-old female who is self-isolated, still symptomatic
- Russell: A 19-year-old female who is self-isolated, asymptomatic
- Taylor: A 76-year-old female who is self-isolated, still symptomatic
- Taylor: A 18-year-old male who is self-isolated, still symptomatic
- Taylor: A 16-year-old female who is self-isolated, still symptomatic
- Taylor: A 1-year-old male who is self-isolated, still symptomatic
- Taylor: A 33-year-old male who is self-isolated, still symptomatic
- Taylor: A 7-year-old male who is self-isolated, still symptomatic
- Taylor: A 32-year-old female who is self-isolated, still symptomatic
- Wayne: A 32-year-old male who is self-isolated, still symptomatic
- Wayne: A 82-year-old female who is self-isolated, still symptomatic

There were fewer new cases this week at the state and district level. However, our new case rate, as for the last four weeks, remains higher than the state average (9.65 per 10,000 vs 8.89 per 10,000). We have 70 fewer active cases compared to this time last week (311 vs 381). We lost 3 people to COVID-19 this week.
Please, let’s all continue to do our part in slowing the spread of COVID-19 by wearing our face coverings, avoiding crowds (especially in confined spaces), social distancing when around others, increasing our hand hygiene, increasing our general sanitation, and by avoiding the touching of our faces.

The Lake Cumberland area has experienced 2,388 cumulative confirmed cases and there have been 56,461 confirmed COVID-19 cases across all 120 Kentucky Counties as of today (this includes 56,415 statewide plus 46 recently reported cases in Lake Cumberland not in the Governor’s/Department for Public Health’s daily report). Regardless of the confirmed case count for any Lake Cumberland County, we believe COVID-19 to be widespread. The LCDHD is working tirelessly, including nights and weekends, to identify and contact all those with whom any positive case may have come into close contact, and to follow-up daily with positive cases. Additionally, we are striving diligently to follow-up on business-related complaints regarding noncompliance with the Governor’s Executive Orders.

The virus is thought to spread mainly from person to person: 1) between people in close contact with one another (within 6 feet), and/or 2) via respiratory droplets produced when an infected person coughs or sneezes. Droplets can land in the mouths or noses of people who are nearby or possibly be inhaled into the lungs.
